YOUR DONATION IN ACTION

every drop counts!

July 2025 – June 2026

IDRF

SAFE WATER. STRONGER COMMUNITIES.

Because of your generosity, families around the world now have something many of us take for granted: clean, safe water close to home.

It means children no longer spend their mornings fetching water. It means mothers can cook, clean, and care for their families without fear of illness. It means communities can plan for the future, knowing their water will still be there tomorrow.

Thank you for funding a water well between July 2025 and June 2026. This report shows what your gift made possible.

To direct more of every dollar toward building and maintaining water projects, IDRF consolidates its well reporting into one annual report. Your donation went to the country you chose, and in the pages that follow you'll see how wells in that country, and across our water program, are changing lives.

For many of our donors, a well is Sadaqah Jariyah: a gift whose benefit, and reward, continues for as long as people drink from it. Your impact will carry on for generations.

Thank you for being part of this work.

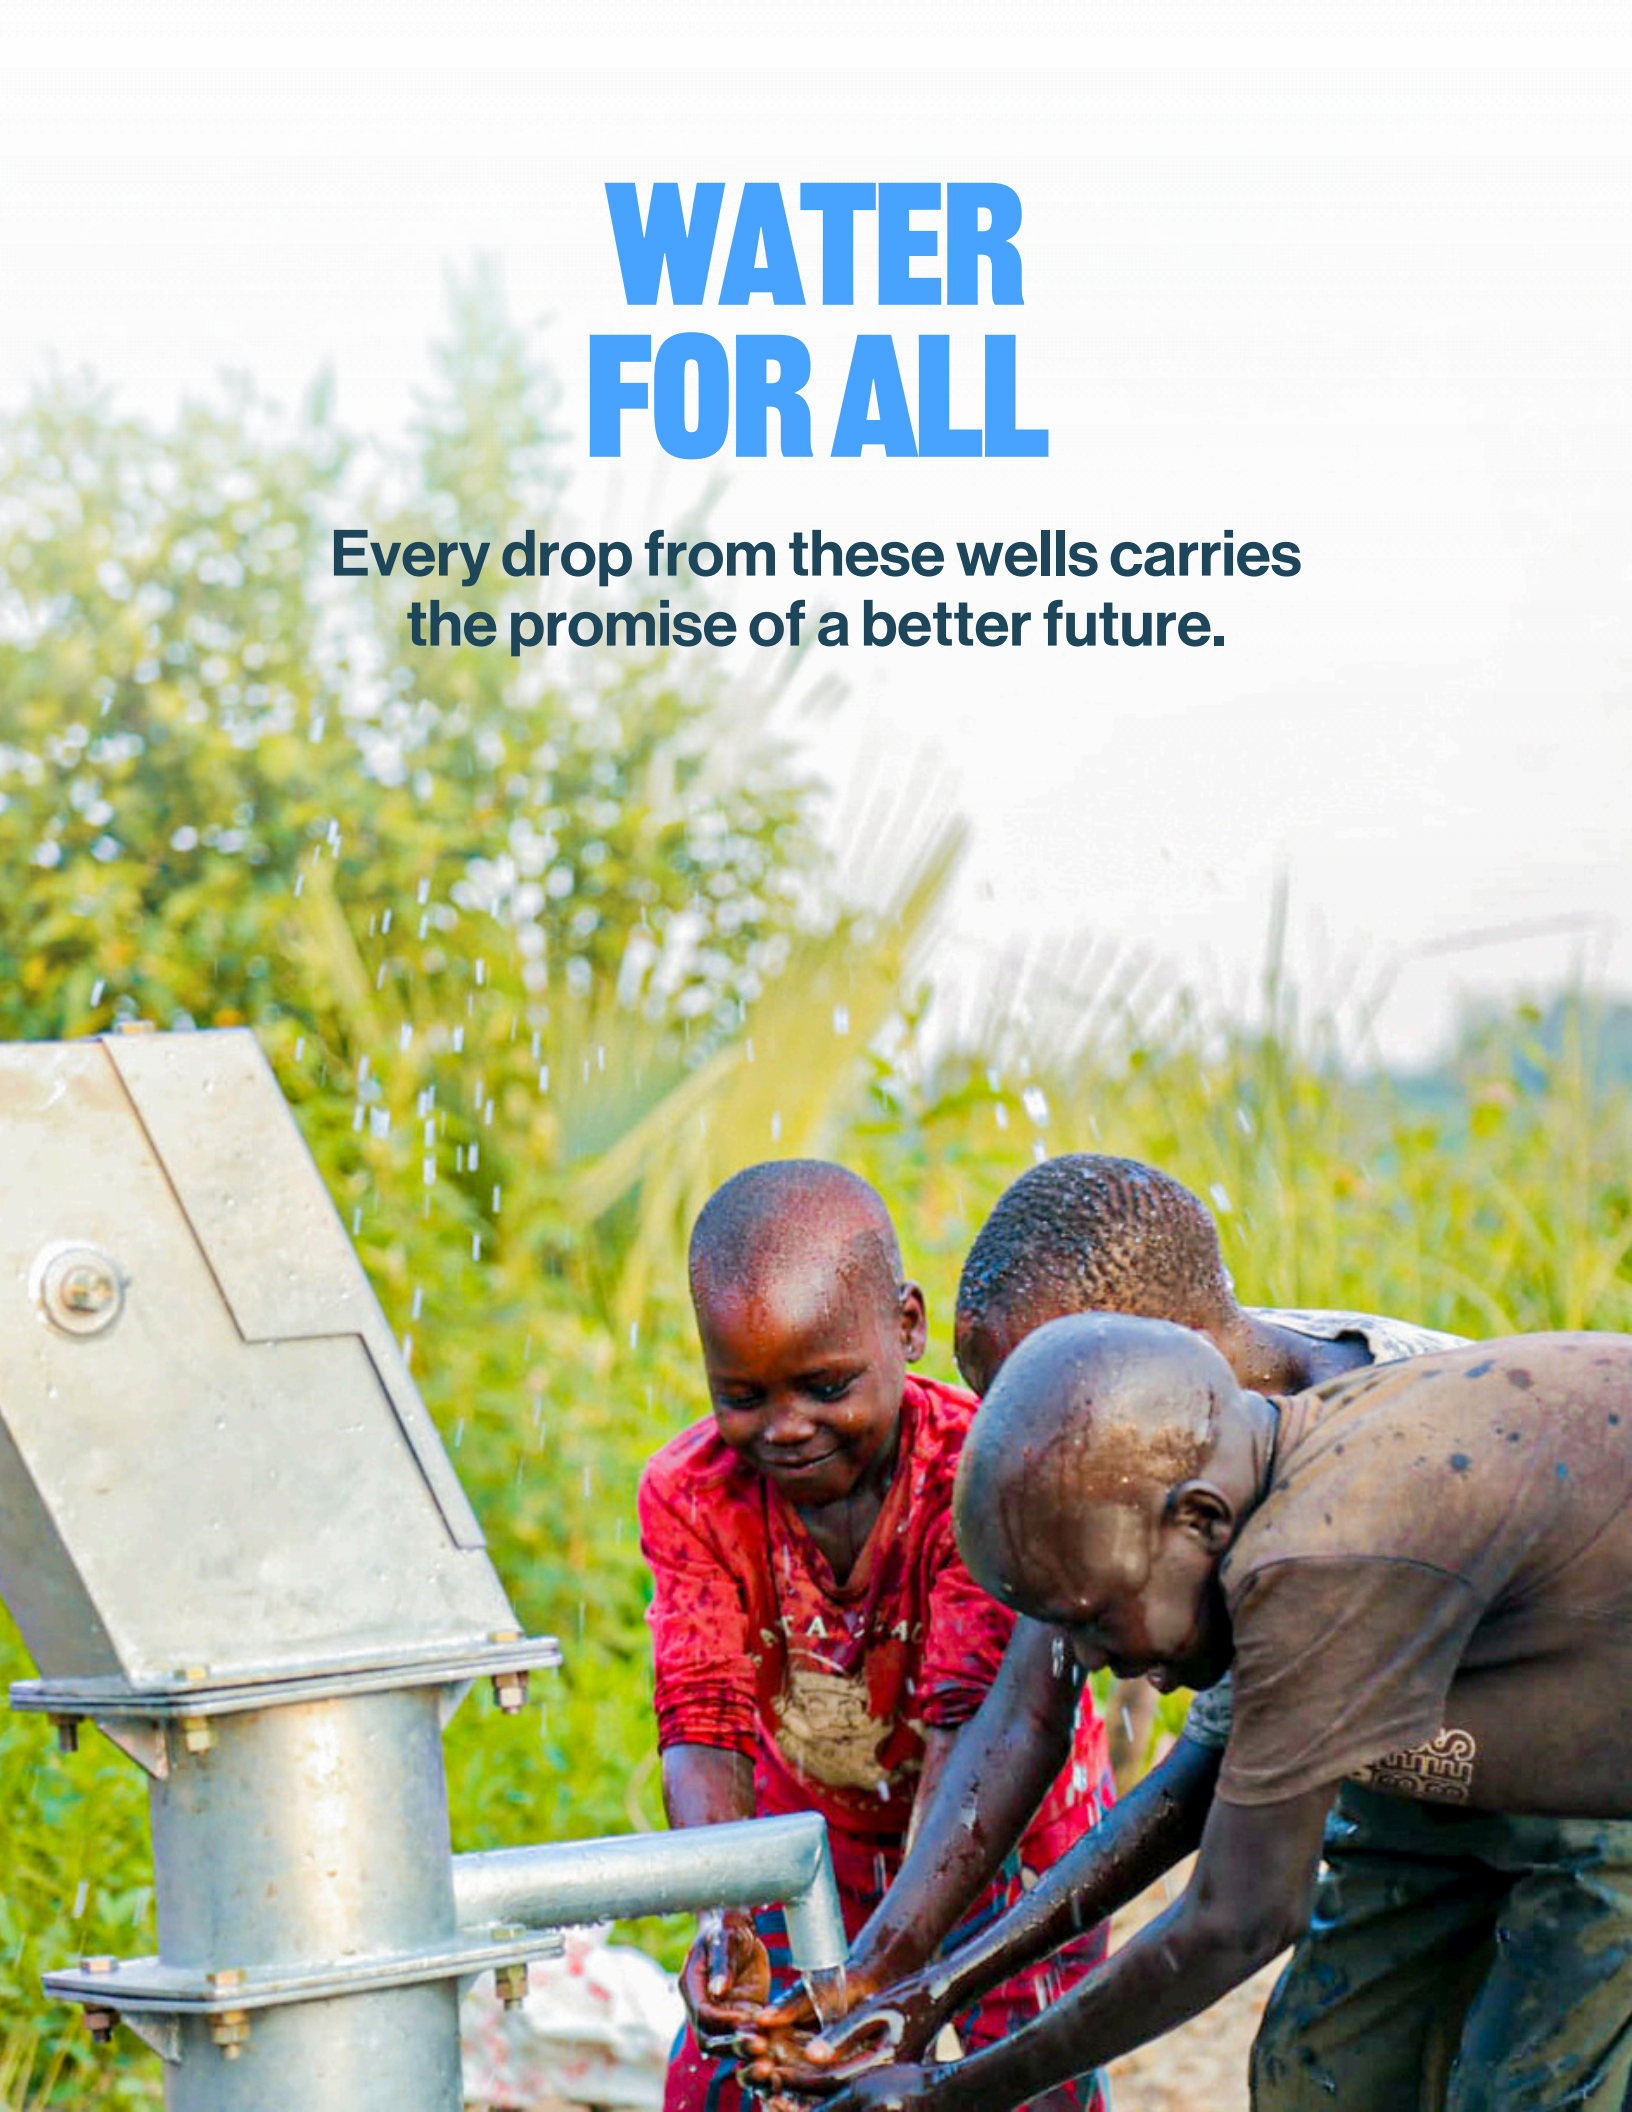

IDRF IS RECOGNIZED AS A TOP 100 OUT OF 90,000 CHARITIES RANKED BY CHARITY INTELLIGENCE, WITH 90% OF EVERY DOLLAR DIRECTLY HELPING THOSE IN NEED.

WATER FOR ALL

Every drop from these wells carries the promise of a better future.

THE FUTURE OF FOOD SECURITY

Sustainability is a multifaceted issue, in which food access and meeting basic nutritional needs is crucial. Achieving a healthy and sustainable food future is an urgent matter that depends on global collaboration. In the next five years, IDRF aims to achieve a sustainable and resilient food system through our communities by:

- Ensuring our food packages address the complex cultural and regional needs.
- Increase women's active participation and leadership in the decision making process of local food access and security.
- Supporting farmers and local communities to adapt to climate change and build more resilient food systems.

BETTER HEALTH, BRIGHTER FUTURES

The global pandemic has significantly affected global health and health systems. Years of progress made in global health is now at risk of disappearing. In the next 5 years, IDRF aims to repair and strengthen access to healthcare by:

- Strengthening local health systems through capacity building, establishing remote clinics and providing medical equipment.
- Supporting midwifery programs and establishing women's health centres.
- Expanding access to diagnostic services.

WATER FOR ALL

Water and sanitation flow through every aspect of sustainable development. We believe that access to this essential service is a human right. In the coming years, IDRF aims to improve water security for the most vulnerable communities. This will be done by implementing and altering affordable access to clean drinking water, by:

- Ensuring management structures that are gender-inclusive
- Creating multi-use water systems to provide for communities, healthcare facilities and agriculture.
- Continuing to build and rehabilitate water wells that will be supported and maintained by the local community.

EDUCATION IS THE FUTURE

Education is vital in alleviating poverty, improving lives, and creating thriving communities. For our 5-year strategy, IDRF will work towards promoting learning and development for all, through:

- Providing education services for children and youth and aid in minimizing the psychological impact of disasters and emergencies.
- Removing and reducing the lack of accessibility to education for girls and children with special needs.
- Continue to provide food and financial assistance to students and their families.

TRAINING FOR THEIR FUTURE

Equitable and sustainable economic recovery is key in building resilient communities. In the next 5 years, IDRF aims to ensure marginalized communities are not left behind in the global economic recovery efforts by:

- Develop and promote sustainable agriculture and livestock programs.
- Address gender disparity and gender pay gap in the workforce
- Promote small and medium-sized businesses and support informal sector workers

KENYA

30
wells built in Kenya

14,583
beneficiaries supported

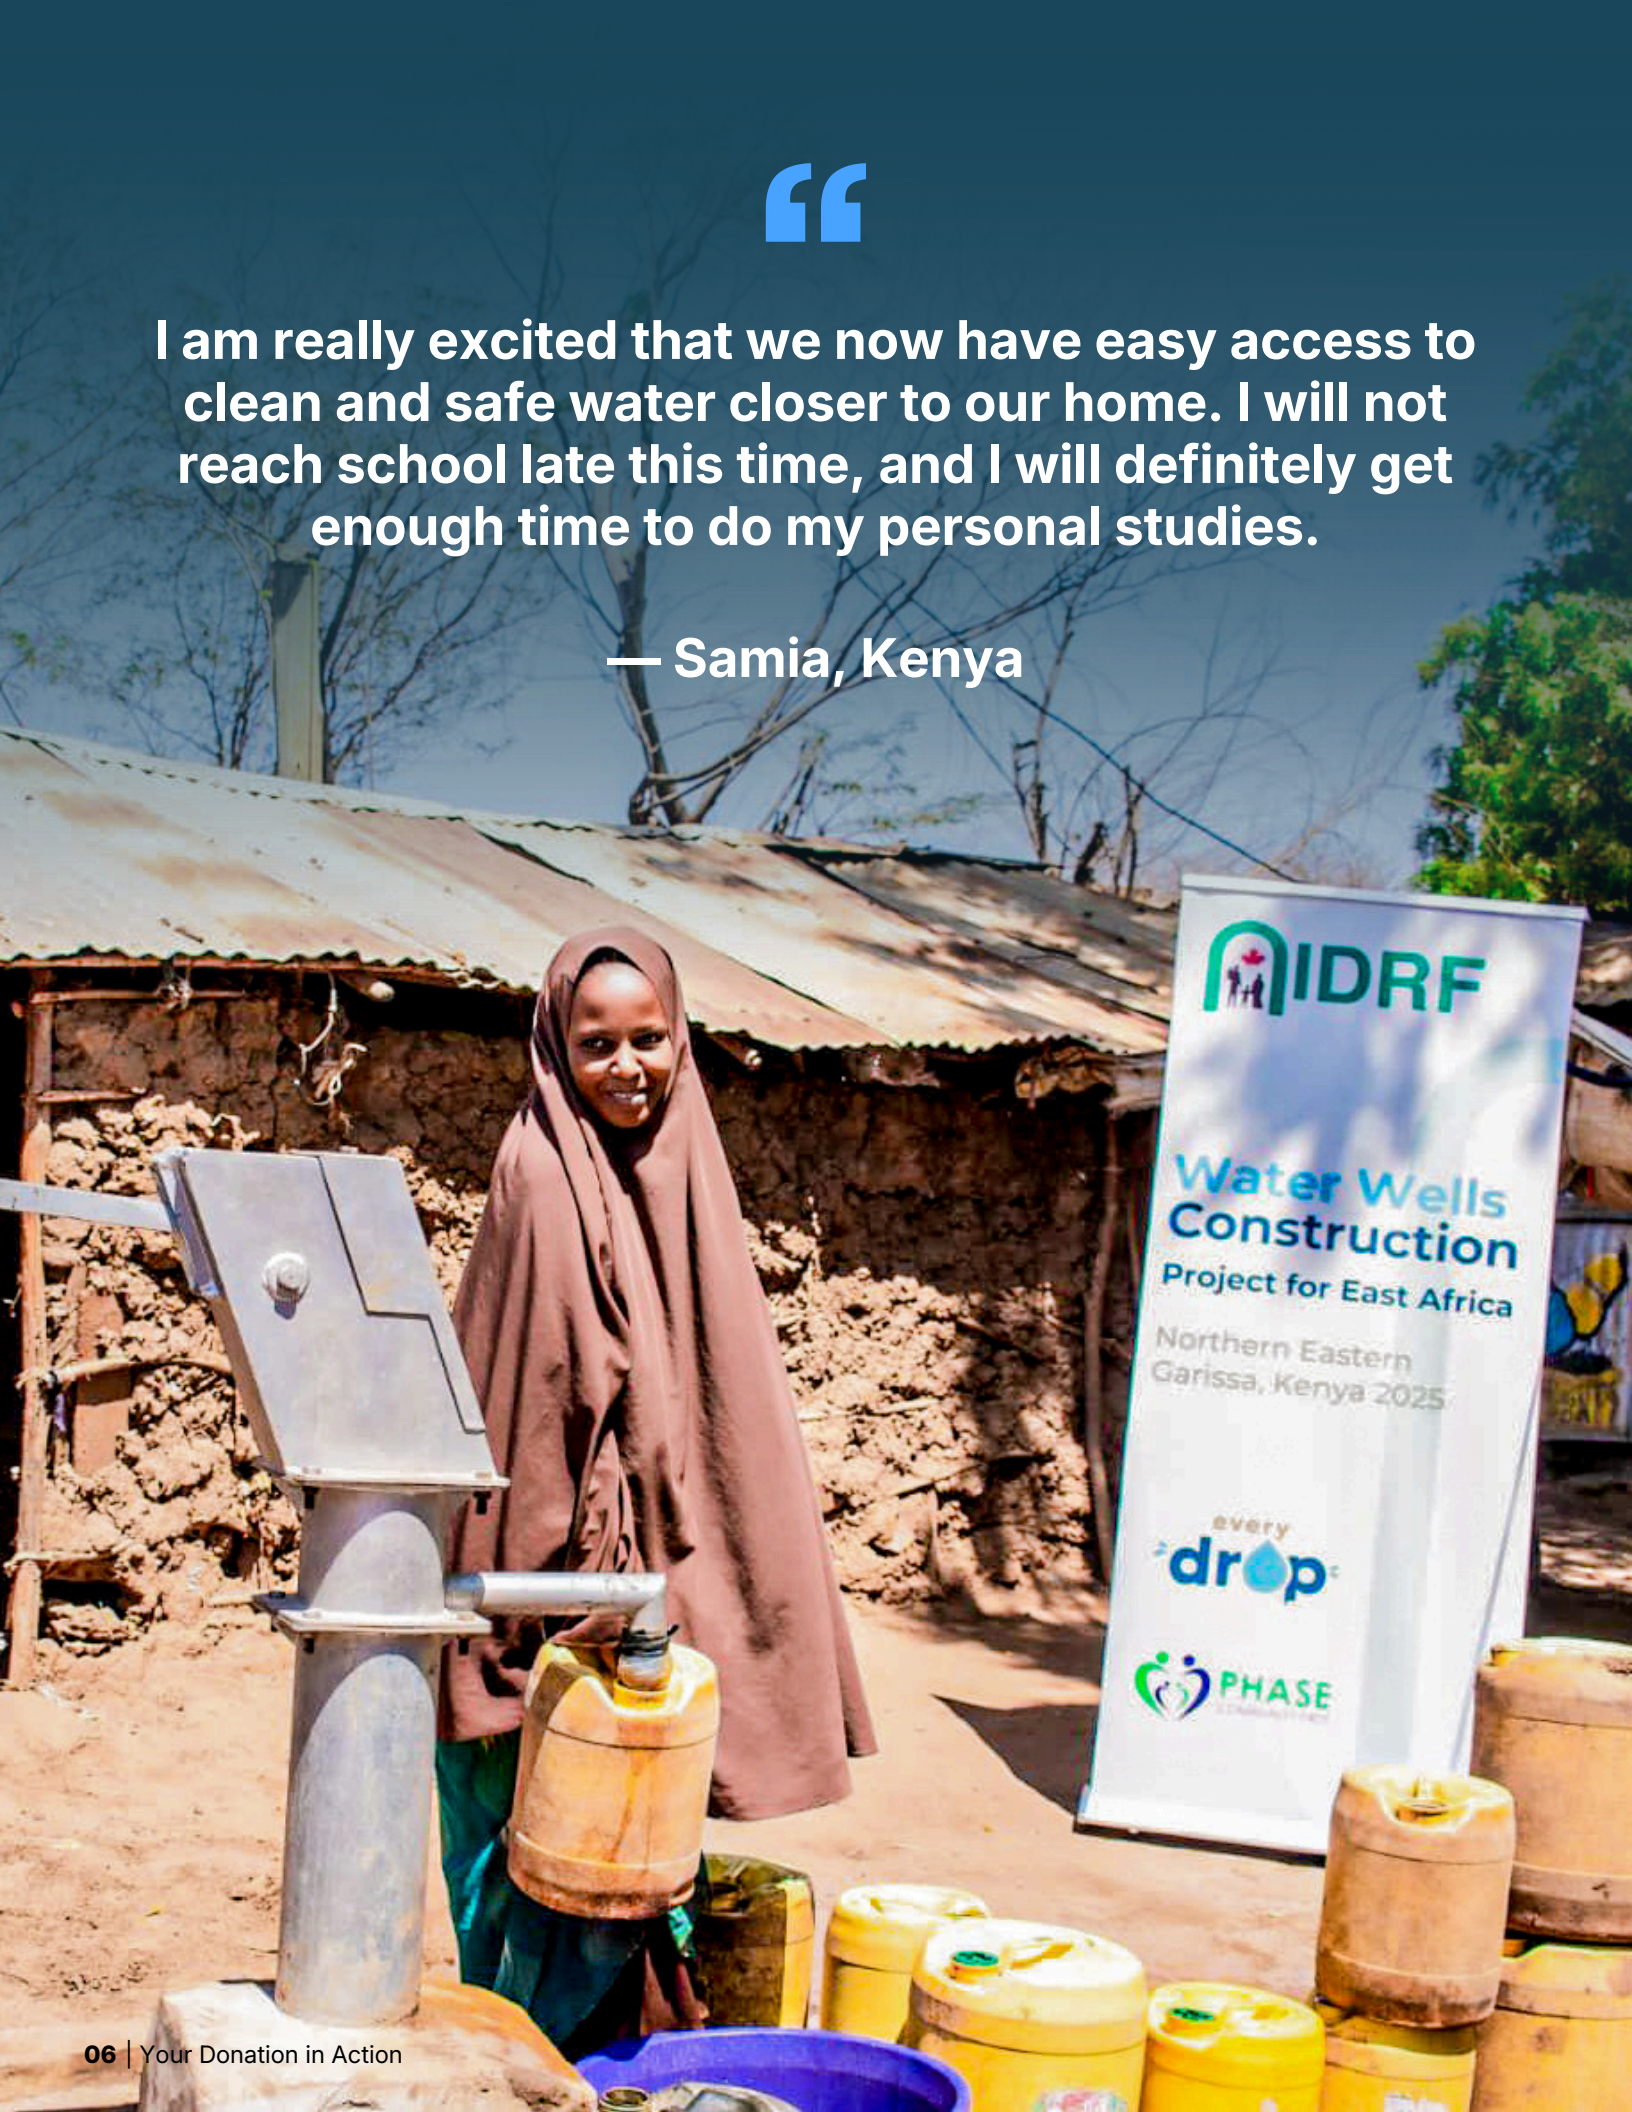

In Garissa County, where drought can last for seasons, your well put clean water within walking distance of home.

Northeastern Kenya is one of the driest parts of the country. The Horn of Africa drought that ended in 2023 was the worst in four decades, and when rain does come, it often arrives as flash floods that wash away more than they replenish.

For many families, that meant long walks to open water sources shared with livestock.

Between July 2025 and June 2026, IDRF and our partners completed 30 hand-pump wells across Garissa, now serving 14,583 people. Each one draws from groundwater, so it keeps working when the rains fail.

The change shows up in ordinary days. Students arrive at school on time. Families spend less on medicine and more on what comes next. And because local committees are trained to maintain each pump, your gift keeps giving long after construction ends.

I am really excited that we now have easy access to clean and safe water closer to our home. I will not reach school late this time, and I will definitely get enough time to do my personal studies.

— Samia, Kenya

PHASE

BANGLADESH

150
wells built in Bangladesh

20,000
beneficiaries supported

In Bangladesh, the problem is rarely too little water. It's water that isn't safe to drink.

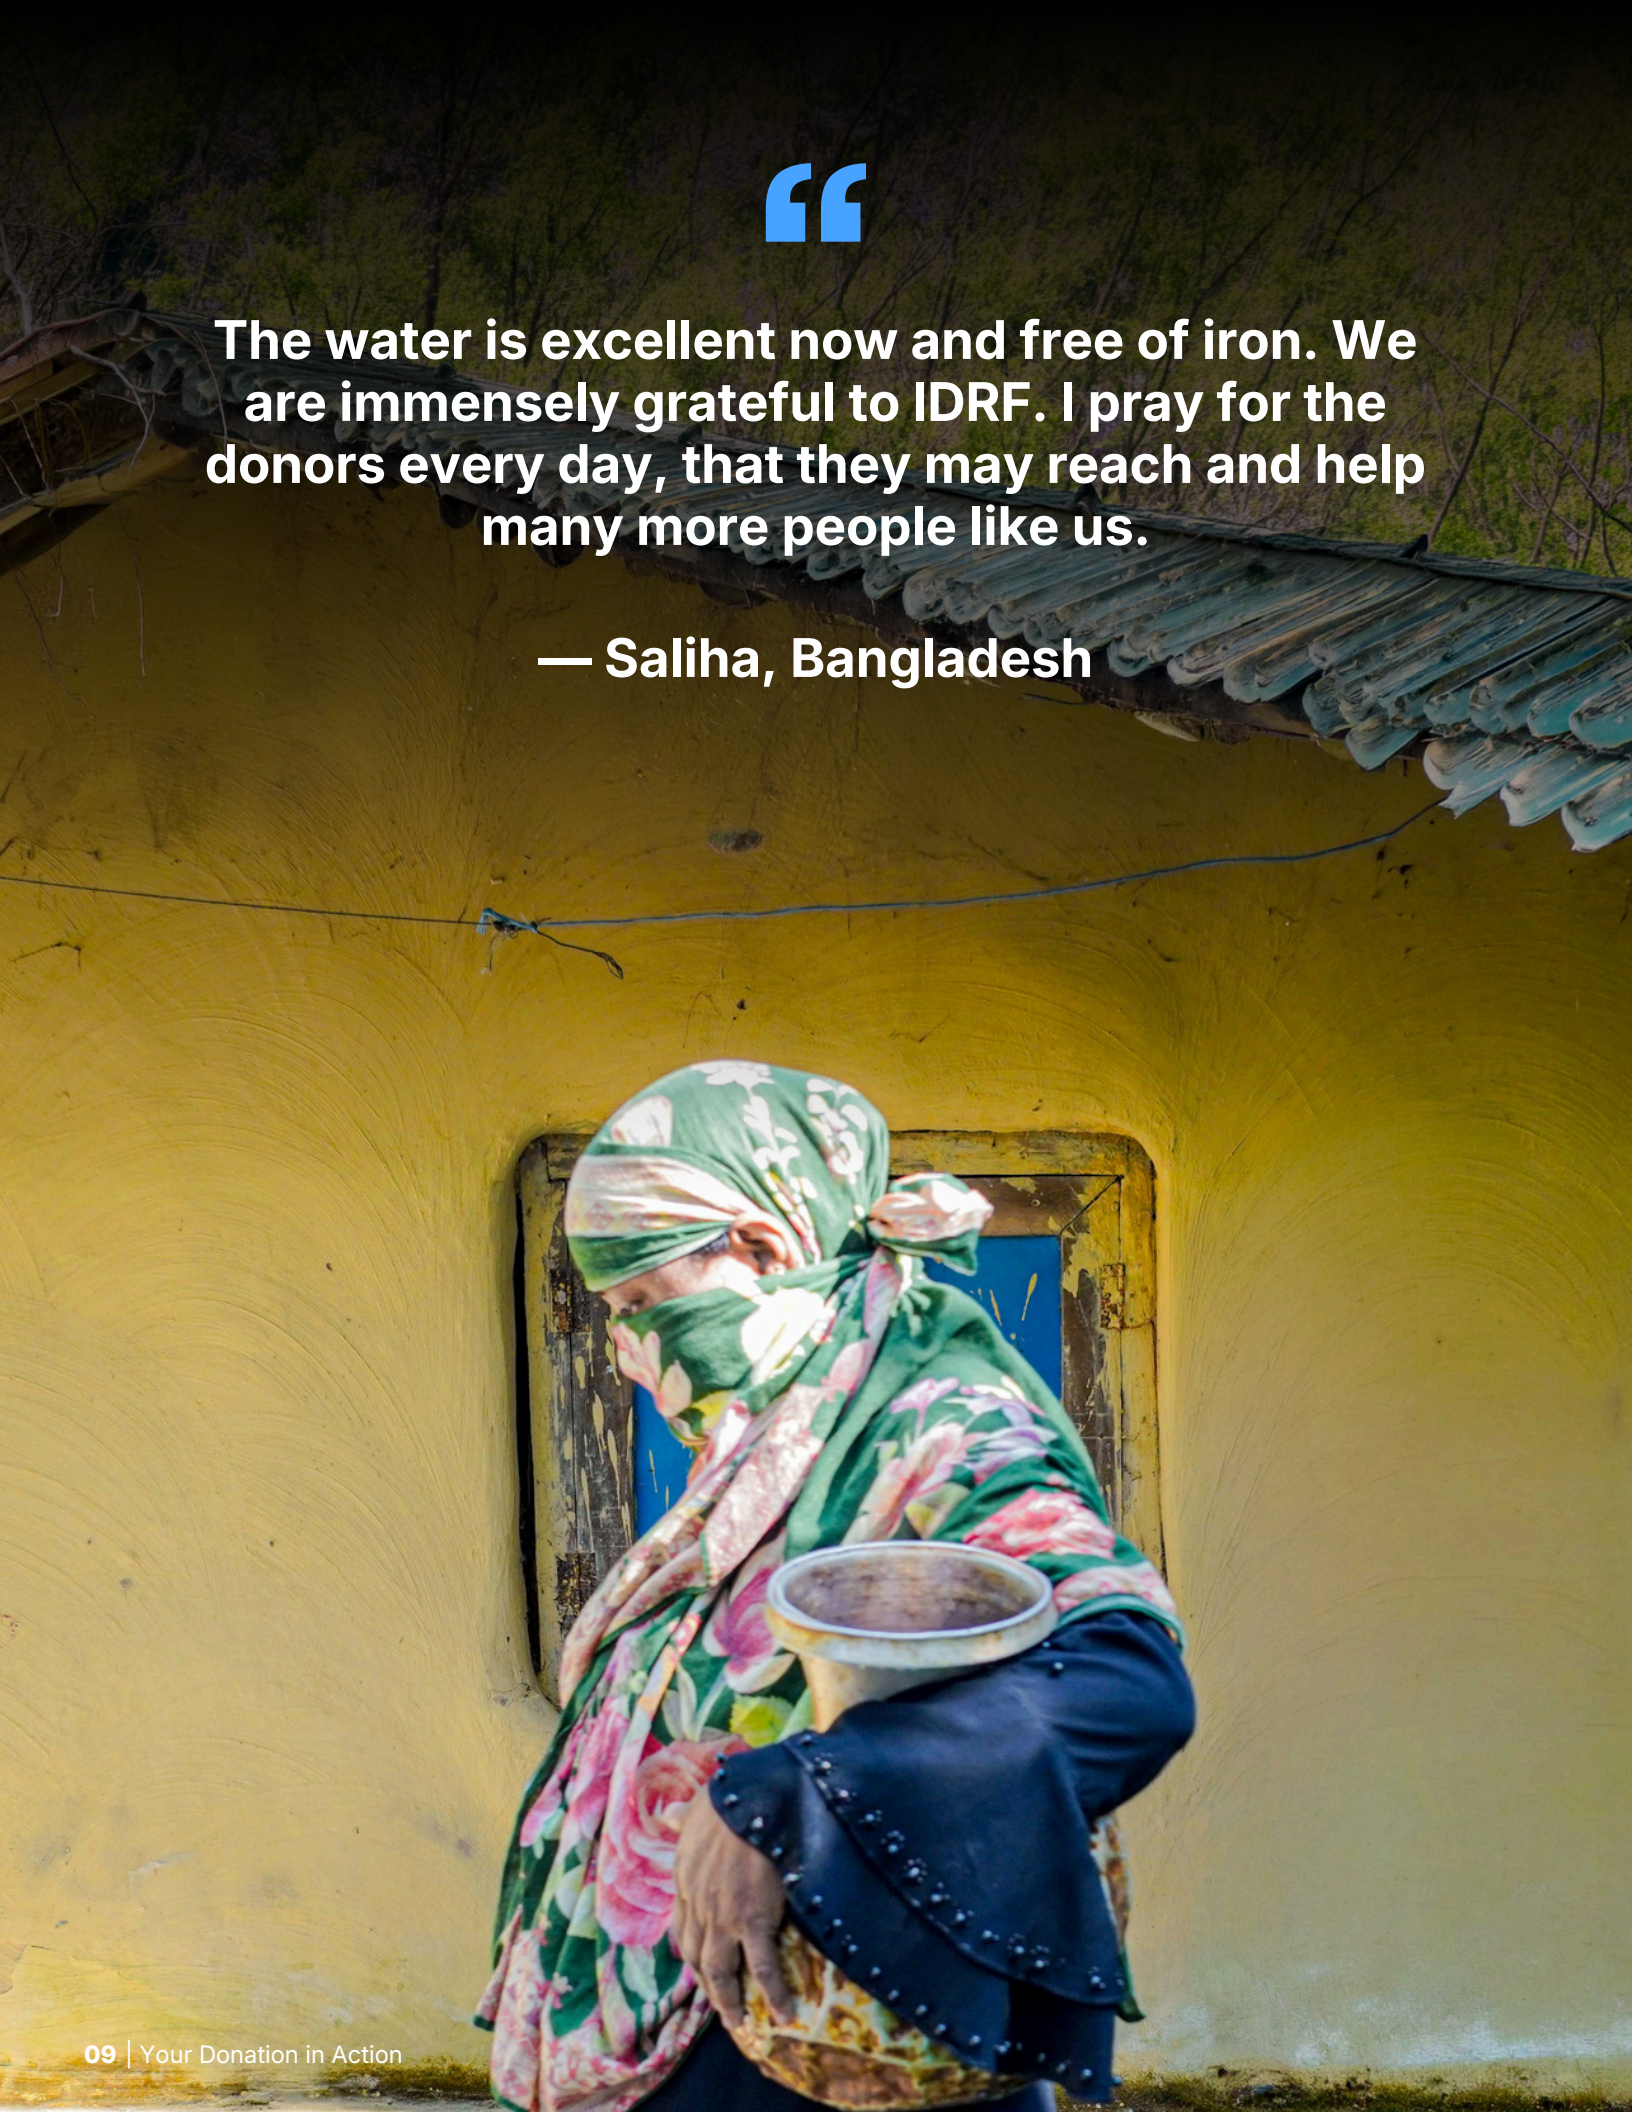

Shallow groundwater across much of the country carries naturally occurring arsenic and iron, and repeated flooding contaminates the ponds and shallow wells families rely on. Water can look clear and still make a family sick.

That's why IDRF builds deep tube wells in Bangladesh. They reach cleaner water far below the contaminated layer.

Between July 2025 and June 2026, your support helped complete 150 deep wells in Cox's Bazaar, reaching 20,000 people. Every well is water-tested before it's handed over to the community.

For families like Saliha's, the difference is immediate: water free of iron, safe for children, and close to home. Time once spent searching for clean water now goes to work, school, and family.

“

The water is excellent now and free of iron. We are immensely grateful to IDRF. I pray for the donors every day, that they may reach and help many more people like us.

— Saliha, Bangladesh

INDIA

84
wells built in India

2,100
beneficiaries supported

Across rural India, wells are running deeper and drier each year. Your gift brought reliable water back within reach.

India is home to nearly a fifth of the world's people but only about 4% of its fresh water. In rural West Bengal, groundwater is being drawn faster than the monsoon can refill it, and summer heatwaves are growing longer and harsher.

When village sources run dry, the work of finding water falls hardest on women and girls.

Between July 2025 and June 2026, IDRF and our local partners completed 84 wells in West Bengal, serving 2,100 people. Each site was chosen with the community and tested for water quality before use.

A reliable well means fewer missed school days, more time for paid work, and steadier health through the hottest months. It also gives families the security of knowing water will be there tomorrow.

“This water well has made life easier for my family and allows me to focus more on my farming. I am grateful to have access to clean water, especially during the dry season. It brings peace of mind to my family.”

— Zahir, India

CHAD

10
wells built in Chad

4,000
beneficiaries supported

In Chad, where the desert keeps moving south, a single well can anchor an entire community.

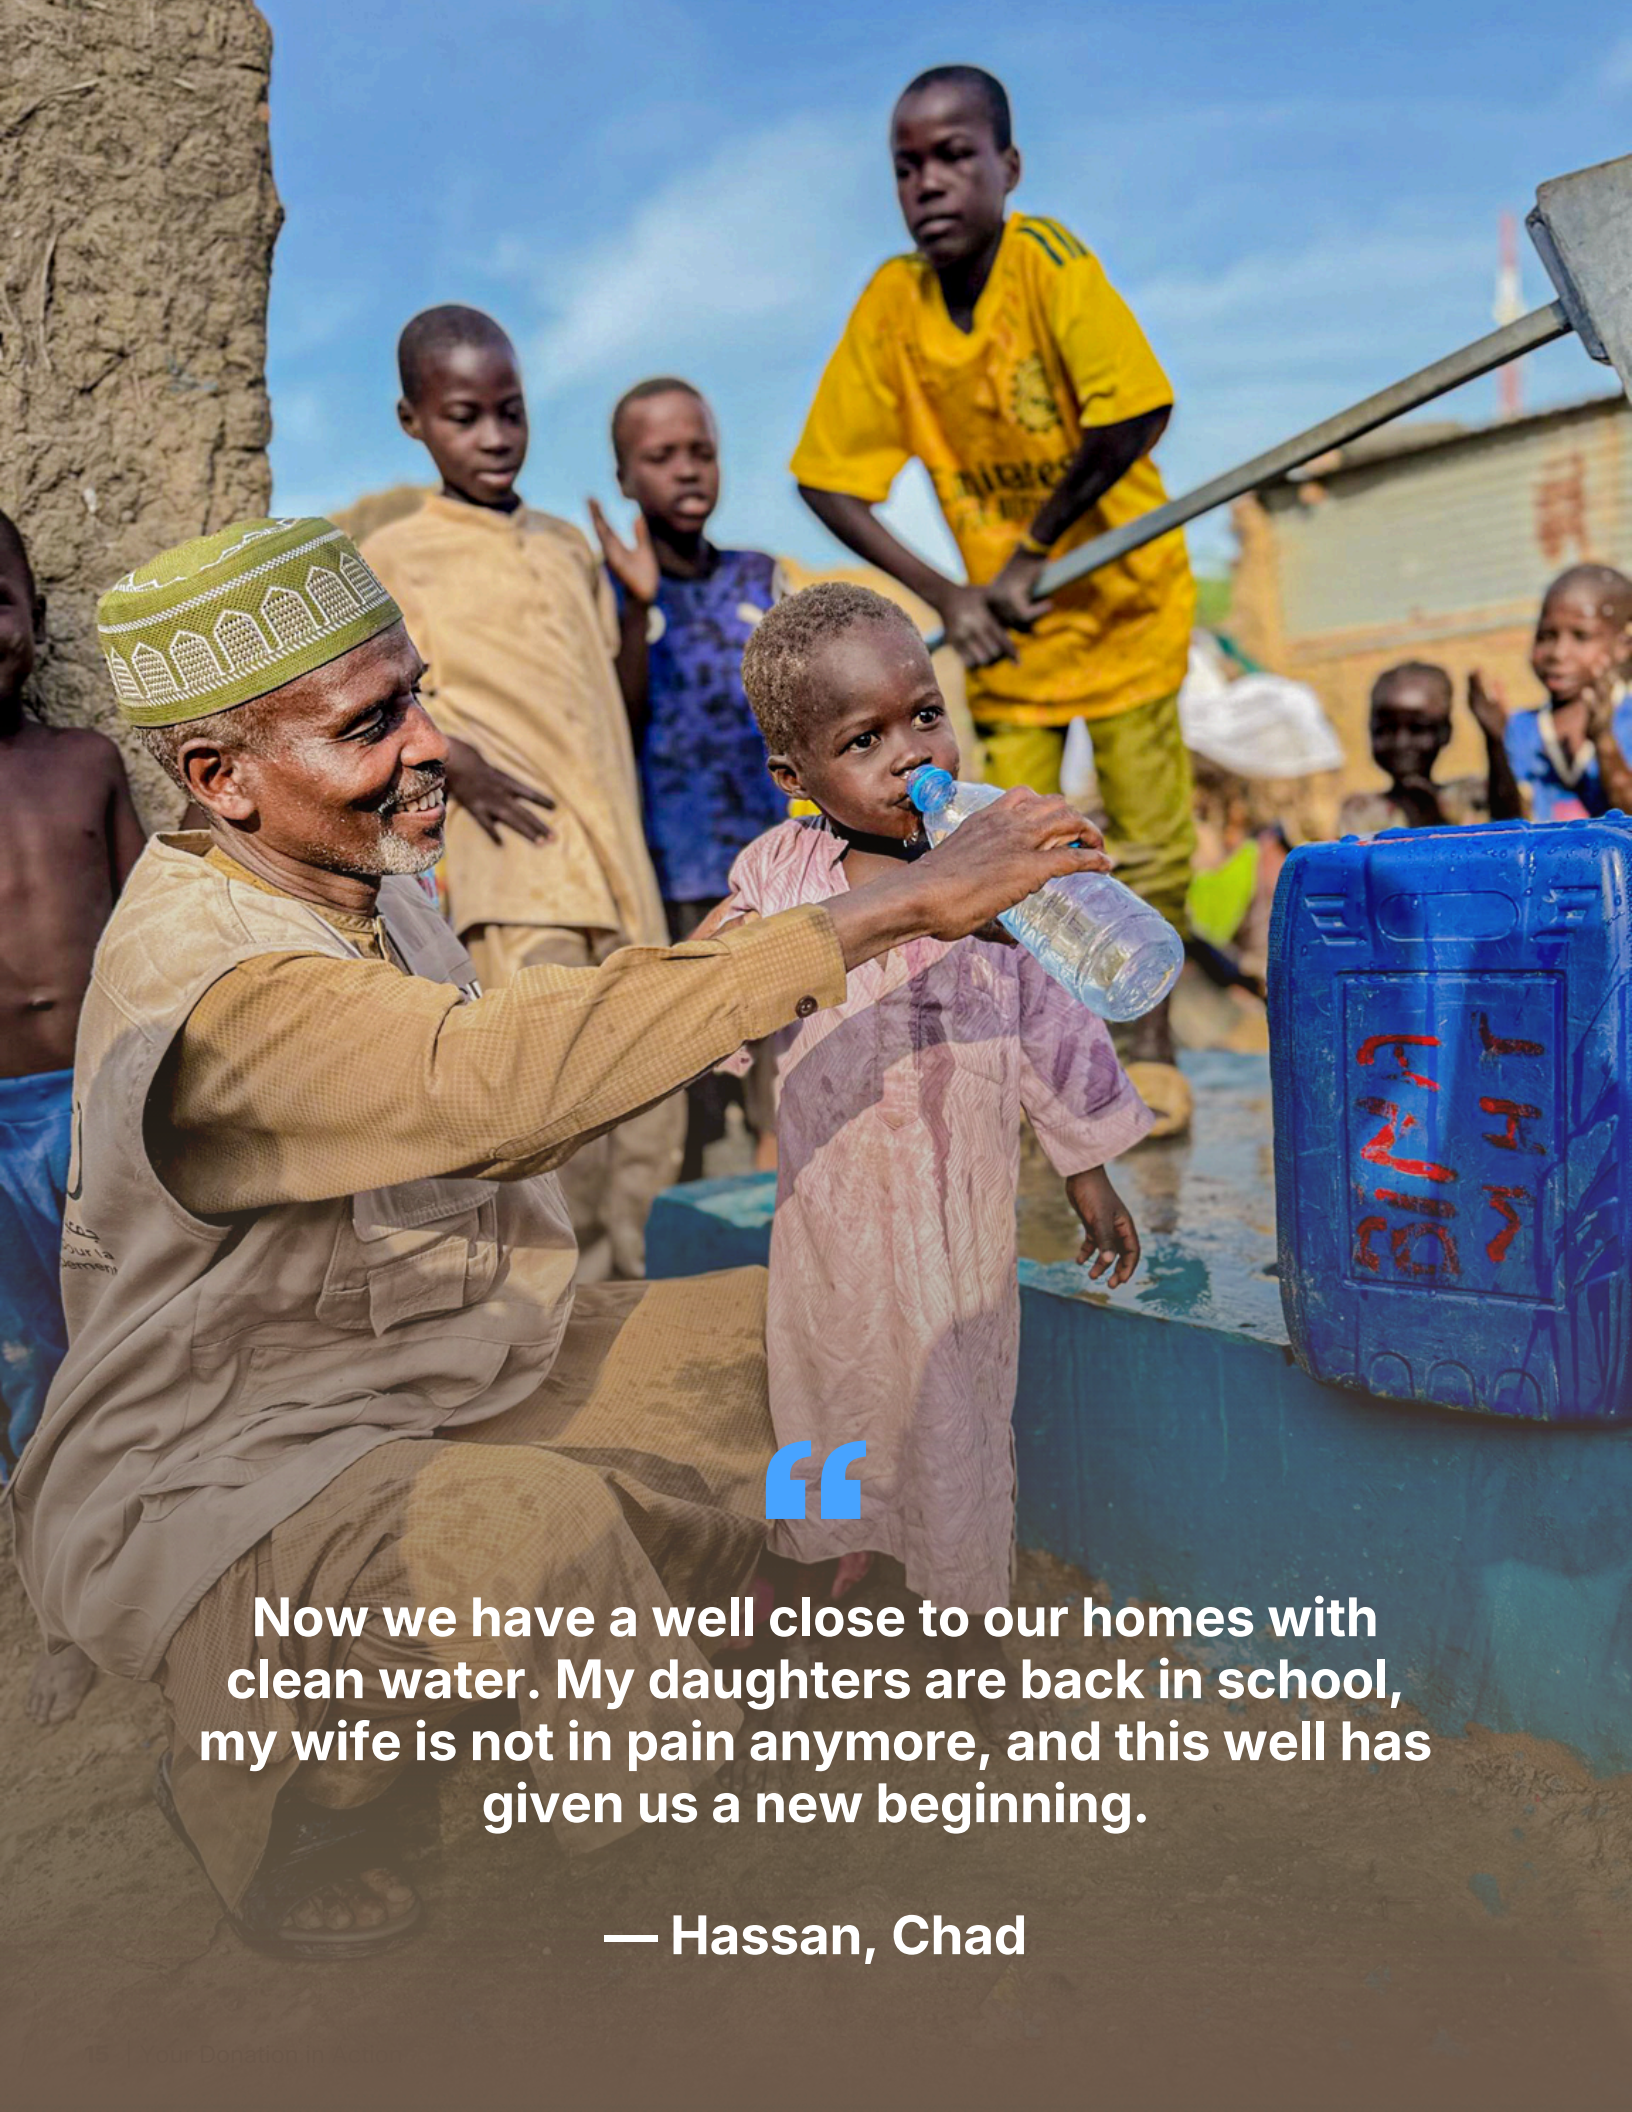

Chad is one of the hardest places in the world to find safe water. Lake Chad has shrunk dramatically since the 1960s, and the rainy season is growing shorter and less predictable.

Between July 2025 and June 2026, your support helped IDRF complete 10 wells in across Chad, serving 4,000 people.

Water close to home changes the shape of a day. Girls can stay in school. Mothers can care for newborns with water they trust. Families can keep livestock and gardens alive through the dry season, building a future drought can't easily take away.

Wells completed in:
Ferick Darsalam, Gaya Ngambi, Pays-Bas, Houdouk B, Houdouk A, Assi Grana, Kasko, Farwaye, Yedwa, Fousknsir

“

Now we have a well close to our homes with clean water. My daughters are back in school, my wife is not in pain anymore, and this well has given us a new beginning.

PAKISTAN

12
wells built in Pakistan

3
water filtrations systems built

1,407
beneficiaries supported

In Sindh, where extreme heat and recurring floods test families every year, your support brought clean water close to home.

Districts like Jacobabad see some of the highest temperatures on Earth, and monsoon floods return season after season, contaminating the shallow sources families rely on.

Between July 2025 and June 2026, IDRF built 12 hand-pump wells across six villages in Ghotki and Jacobabad. Each has an apron and laundry pad to keep the area around the pump clean, and together they serve 357 people.

In Sukkur, IDRF also built three water filtration plants that provide 150 families with safe drinking water every day.

With water close to home, hours once spent hauling water in extreme heat go back to school, work, and family.

We used to wake before sunrise to queue for water, and sometimes we came home empty-handed. Now my children get to school on time, and I grow vegetables at home. This pump has changed our lives.
